Art Unit: 1772

1. Applicant's arguments with respect to claims 13-19 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 13-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simons (5,562,211) in view of Cole (5,622,761).

Simons relates to a double-sided adhesive tape comprising, as shown in figure - 6, a flexible foam layer 40, adhesive coatings 44 and 48 disposed on both sides, and two removable release liners 50 and 70. Further, the release liner 50 is larger than the other release liner 70 or the foam layer 40. However, Simons fails to teach that one of the adhesive is a weak adhesive and the other is a strong adhesive. Cole discloses a double-sided adhesive tape which allows for differential adhesiveability based on either or both of chemical or physical means (abstract). The adhesive can be stronger and weaker (col. 3, line 65), as such. Cole teaches the advantage of using weaker and stronger adhesive on opposite sides of a double-sided tape to provide for varying the adhesiveability of objects adhered together. Therefore, it would have been obvious to one having ordinary skill in the art to utilize Cole's teaching of providing weaker and stronger adhesive on opposite sides of a double-sided tape in the invention of Simons to provide for differential adhesive characteristic.

Art Unit: 1772

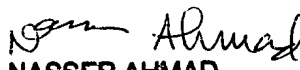

The phrases, such as "for transferring", "being fashionable", "being temporarily affixable", "being transferable", etc. have not been given patentable weight as said phrases are directed to an intended use of the product as claimed.

The compressible thickness of the foam layer in Simons would have been obvious as claimed in claim 18 based on optimization through routine experimentation.
